
CONTENTS

1	Introduction	1
1.1	Quantum Sutherland system	1
1.2	Symmetric Jack polynomials and their clustering	2
1.3	Jack polynomials with prescribed symmetry	4
1.4	Non-symmetric Macdonald polynomials and Macdonald polynomials with prescribed symmetry	6
1.5	Main results	8
2	Preliminaries	14
2.1	Compositions, partitions, and superpartitions	14
2.2	Symmetric polynomials	21
2.3	Non-symmetric Jack polynomials	24
2.4	Jack polynomials with prescribed symmetry	27
3	Regularity and uniqueness properties at $\alpha = -(k + 1)/(r - 1)$	40
3.1	More on admissible superpartitions	40
3.2	Regularity for non-symmetric Jack polynomials	41
3.3	Regularity for Jack polynomials with prescribed symmetry	45
3.4	Uniqueness for Jack polynomials with prescribed symmetry	49
3.5	Uniqueness for non-symmetric Jack polynomials	54
4	Clustering properties	63
4.1	Definition clustering property	63
4.2	Clustering properties for $k = 1$	64
4.3	Translation invariance	73
4.3.1	Generators of translation	73
4.3.2	General invariance	78

4.3.3	Special cases of invariance	87
4.4	The clustering condition for $k > 1$	92
5	Macdonald polynomials with prescribed symmetry	99
5.1	Non-symmetric Macdonald Polynomials	99
5.2	Macdonald polynomials with prescribed symmetry	102
5.3	Clustering properties	110
5.3.1	Zeros of the non-symmetric Macdonald polynomials	111
5.3.2	Clustering properties for $k = 1$	112
5.3.3	Clusterings properties for $k \geq 1$	116
A	Recursive formula for non-symmetric Jack polynomials	122
B	Triangularity of Jack polynomials with prescribed symmetry	123
C	Sets of cells associated to superpartitions	125
D	Clustering for non-symmetric Jack polynomials	127
E	Examples of admissible and invariant superpartitions	129
F	Recursive formula for non-symmetric Macdonald polynomials	132
G	Expansion of Macdonald polynomials	133
	BIBLIOGRAPHY	136
